FMC-SDF

FMC Module with four 24-bit, 625 kSPS A/D channels; two 18-bit D/A channels with on-board timing controls V1.0

FEATURES

- Four A/D Input Channels
 - 0 ± 5V Input Range
 - 0 625 kSPS, 24-bit A/D
 - 0 **Differential Inputs**
- Two D/A Output Channels
 - 2.1µs Settling Time, 18-bit D/A 0
 - 0 ± 5V Output Range
- **Tachometer Input**
 - 0 Schmitt-triggered for glitch tolerance
 - 0 Can be configured to operate differentially
- **Sample Clocks and Timing Controls**
 - 10MHz, ±250 ppb stability on-board 0 reference
 - Programmable PLL 0
 - Programmable Clock Frequency as 0 low as 3.05 KHz
 - Integrated with FMC Triggers 0
- FMC module, VITA 57.1
 - 0 High Pin Count no SERDES required
 - Compatible with 1.7 and 2.5V VADJ 0
 - Power Monitor and Controls 0
 - **15W Typical Power Consumption**
- Conduction Cooling per VITA 20 subset
- Environmental Ratings for -40 to 85C, 9g RMS sine, 0.1g²/Hz random vibration

APPLICATIONS

- Seismic Data Acquisition
- Audio and Acoustic Testing
- ATE
- Other High SNR Data Acquisition

SOFTWARE

- Data Acquisition, Logging and Analysis applications provided
- Windows/Linux Drivers
- C++ Host Tools
- VHDL/MATLAB Logic Tools

The FMC-SDF module features four simultaneously sampling ADCs and a dual output DAC. High resolution sigma-delta ADCs and high resolution DACs support high dynamic range applications such as audio, ATE, and seismic data acquisition.

Clock and trigger controls include support for consistent servo loop timing, counted frames, software triggering and external triggering. The sample rate clock is either an external clock or on-board programmable PLL clock source.

The FMC-SDF power consumption is 15 W for typical operation. The module may be conduction cooled using VITA20 standard and a heat spreading plate. Ruggedization levels for wide-temperature operation are available from -40 to +85C operation and 0.1 g²/Hz vibration. Conformal coating is also available.

Support logic in VHDL is provided for integration with FPGA carrier cards. Specific support for Innovative carrier cards includes integration with Framework Logic tools that support VHDL and Matlab developers. The Matlab BSP supports real-time hardwarein-the-loop development using the graphical block diagram Simulink environment with Xilinx System Generator for the FMC integrated with the FPGA carrier card.

Software tools for Innovative carrier cards include host development C++ libraries and drivers for Windows and Linux, 32/64-bit including RTOS variants. Application examples demonstrating the module features are provided. * Sampling rates in an application depend on carrier and system design.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Innovative Integration products and disclaimers thereto at the end of this datasheet. All trademarks are the property of their respective owners.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of the Innovative Integration standard warranty. Production processing does not necessarily include testing of all parameters.

This electronics assembly can be damaged by ESD. Innovative Integration recommends that all electronic assemblies and components circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

Product	Part Number	Description		
<u>FMC-SDF</u>	80371 - <cfg> -<ruggedization></ruggedization></cfg>	FMC module with four 24-bit A/Ds (625 kSPS per channel), two 18-bit DACs (2.1 µs settling time), on-board PLL. <ruggedization>: L1L4 per <u>Ruggedization Options</u> table</ruggedization>		
Logic				
FrameWork Logic	TBD	FMC-SDF FrameWork Logic board support package for RTL and MATLAB. Includes technical support for one year.		
Cables				
Ribbon Cable	67227	Ribbon Coaxial Cable connecting FMC module to breakout module		
Breakout	80350-1-L0	Breakout module with all SMA connectors		
Options				
FMC Hosts				
Data Loggers				
Embedded Computers

J2 (SAMTEC QSE-020-01-L-D-A) Connection Detail

Signal Name	J2 Pin Assignment	Description
CH0_P CH0_N CH1_P CH1_N CH2_P CH2_N CH3_P CH3_N	1 5 9 13 4 8 12 16	The four ADC channel inputs. Full-scale range is ±5V.
DAC0 DAC1	17 20	The two DAC channel outputs. Full-scale range is ±5V.
TACH_P TACH_N	21 24	The differential tachometer input. Using a hysteresis comparator (Schmitt trigger), the input is shipped with TACH_N connected to 2.5V, but can be modified such that TACH_P and TACH_N function differentially. Contact factory for detailed information.
EXT_TRIG_IN_P EXT_TRIG_IN_N	28 32	External Trigger Input. AC-coupled, differential termination 100 ohms. Nominally LVDS levels.
EXT_CLK_P EXT_CLK_N	25 29	External Clock Input. AC-coupled, differential termination 100 ohms. Nominally LVDS levels.

Note: 2.5 V logic inputs absolute maximum 2.8V, absolute minimum -0.3V

Standard Features

Analog Inputs			
Inputs	4		
Input Ranges	± 5V		
Input Type	Differential DC Coupled		
Input Impedance	4 kΩ differential 2.5 kΩ single ended		
A/D Device	Analog Devices AD7763		
A/D Resolution	24-bit		
A/D Sample Rate	Up to 625 kSPS ** Decimation feature in logic used for lower data rates		
Data Format	2's complement, 24-bit integer		
Connector	Samtec QSE-020-01-L-D-A		
Calibration	Factory calibrated. Gain and offset errors are digitally corrected in the FPGA. Non-volatile EEPROM coefficient memory.		

Analog Outputs		
Outputs	2	
Output Ranges	± 5V	
Output Type	Single ended DC Coupled	
Output Impedance	50 Ω (Back-terminated to guard against overshoot/undershoot. DC load should be high impedance > 1k Ω .)	
DAC Device	Linear Technology LTC2758	
DAC Resolution	18-bit	
DAC Update Rate	<= 400 kHz (if both channels are simultaneously updated. Will function faster if only one channel is used).	
Connector	Samtec QSE-020-01-L-D-A	

Clocks and Triggering				
Clock Sources	External, or Internal, based on Analog Devices AD9510 followed by AD9508. VCO: 110 – 150 MHz			
Input Type	Single ended, AC coupled			
Tachometer Input	Input threshold: 2.5 V Sensitivity/Hysteresis: ~100 mV			
External Clock Input Range	TBD Vpp			
External Trigger Input Range	TBD Vpp			
Input Impedance	50 Ω			

Clocks and Triggering				
Clock Sources	Internal, based on Analog Devices AD9510/AD9508 or External			
PLL Output	VCO: 110 – 150 MHz AD9510: 3.4375 – 150 MHz AD9508: 3.3569 kHz – 150 MHz			
PLL Jitter	Est. Jitter < 350 fs RMS			
PLL Resolution	\geq 12 kHz using 10 MHz reference			
Phase Noise	-155 dBc / Hz @ 100 kHz offset			
PLL Programming	Via SPI through FMC connector			
PLL Reference	External or 10 MHz on-card 10 MHz ref is ±250 ppb -40 to 85°C			
Triggering	External, software, acquire N frame			
Decimation	1:1 to 1:4095 in FPGA			
Channel Clocking	All channels are synchronous			
Multi-card Synchronization	External triggering, clock, and PLL reference are supported.			

Power Management			
Alarms	Software programmable warning and failure levels		
Over-temp Monitor	Disables analog IO power supplies		
Power Control	Channel enables and power enables		
Heat Sinking	Conduction cooling supported. System level thermal design may be required		

FMC Interface				
Ю	LA[33:0] pairs, HA[22:0] pairs, HB[12:0] pairs			
IO Standards	LA: LVDS HA: LVDS HB: LVCMOS 1.7V to 3.3V			
Required Voltages	3.3V, 12V VADJ = 1.7V to 3.3V			

Physicals	
Form Factor	Single width FMC VITA 57.1
Size	76.5 x 69 mm
Weight	180g (approximate, contact factory if critical to application)
Hazardous Materials	Lead-free and RoHS compliant

Acquisition Monitoring			
Alerts	Trigger, Queue Overflow, Channel Over- range, Timestamp Rollover, Temperature Warning, Temperature Failure, PLL Unlocked

	Supply Current (12V)	1250	mA	(15 W)		
	Supply Current (2.5V VADJ)	< 5.1	mA	(< 13 mW)		
	Power Dissipation	15.03	W	Total		

Notes

- 1. The ADC measurements were taken with the inputs driven complementary using a Stanford Research DS360 Function Generator. When driven single-ended, the THD and SFDR are slightly degraded.
- **2.** The outputs of the DACs were driven directly into two ADC inputs of the same unit. Accordingly, some of the distortion measured (particularly at full amplitude) will have contributions from both the DACs and ADCs.
- 3. Although, the data sheet for the LTC2758 quotes a 2.1 μ s typical settling time, the timing as implemented in the software and firmware (using the "Stream" application example) has a settling time of approximately 6 μ s. Accordingly, the best results will be obtained when the DAC update rate is slower than 100 kHz.

Digital Calibration Note

The FMC-SDF can be digitally calibrated for offset and gain. However, if the signal is clipped (outside the A/D range) the information is lost, so the raw gain is typically designed for a signal level at the A/D that is slightly less than A/D Full Scale in the bandwidth of interest to allow the nominal input range to be measured accurately without clipping when digitally calibrated.

PLL Notes

The serial clock for the ADCs (MCLK) is produced by an integer division (1~32) of the VCO output generated by the AD9510. The VCO has a tuning range of 110 - 150 MHz and the crystal reference frequency is 10 MHz. The AD7763 can function with an MCLK frequency as low as 1 MHz; however, since the maximum divide ratio for the AD9510 (32) results in a range of 3.44 - 4.68 MHz, 3.44 MHz is the lowest frequency at which the ADC can be clocked in the FMC-SDF.

The input word rate of the LTC2758 is also produced by dividing down the VCO. The required relationship between the ADC sample output rate (AD_OCLK) and the DAC input rate (LDAC):

AD_OCLK x N1 x Decimation Rate / (N2 x N3) = LDAC

where:

– N1 is divider ratio for the AD9510 that produces MCLK for the AD7763 from the VCO,

- N2 is the divider ratio for the AD9510 that produces the clock that feeds the AD9508 from the VCO,
- N3 is the divider ratio for the AD9508 that produces LDAC (and CLK1_M2C_P/N), and
- "Decimation Rate" is either 32, 64, 128, or 256 (as the AD7763 is programmed)

One useful simplification is to set either N2 or N3 equal to the decimation rate. This would then require that the ADC and DAC interface rates be related by a fraction that is rational (i.e., the ratio of whole numbers). The "Stream" program places some further restrictions on this relationship to simplify calculation of the divider ratios.

Architecture and Features

The FMC-SDF module has four analog inputs that are simultaneously sampling channels of 24-bit, 625 KSPS A/D input. The A/D inputs have an input bandwidth up to 251KHz. There are two simultaneous D/A channels of 18-bit 476 KSPS output. Additional digital IO control bits from the FPGA are provided for application control and signaling.

Controls for triggering and clocks allow precise control over the collection of data. Trigger modes include frames of programmable size, external and software. Multiple FMC-SDF cards can sample simultaneously using external trigger inputs with synchronized sample clocks. The sample clock can be external or generated from the on-card PLL. The PLL can either use the on-card 10 MHz reference, or can use an external reference. When an external reference is used, the sample clock is synchronous to the reference.

All FMC modules produce hardware alerts that can be exploited by firmware and software tools to produce an on-screen alert mechanism. See below for further details.

Software Tools

Software for data logging and analysis are provided with every FMC module. Data can be logged to system memory at full rate or to disk at rates supported by the drive and controller. Triggering, sample rate controls, and data logging features allow you to use FMC modules in your application without ever writing code. Innovative software applications include *Binview* which provides data viewing, analysis and export data to MATLAB for large data files, as well as support applications for logic loading, firmware updates and system configuration.

Software development tools for the FMC modules provide comprehensive support including device drivers, data buffering, card controls, and utilities that allow developers to be productive from the start. At the most fundamental level, the software tools deliver data buffers to your application without the burden of low-level real-time control of the cards. Software classes provide C++ developers a powerful, high-level interface to the card that makes real-time, high speed data acquisition easier to integrate into applications.

The data acquisition process can be monitored through an on-screen alert mechanism exploiting a combination of hardware alerts from the FMC board along with firmware and these software tools. The alerts provide information on the timing of important events such as triggering, overranges and thermal overload. Packets containing data about the alert including an absolute system timestamp of the alert, and other information such as current temperature. This provides a precise overview of the card data acquisition process by recording the occurrence of these real-time events making the FMC modules easier to integrate into larger systems.

Support for MS Visual C++ is provided. Supported OS include Windows and Linux. For more information, the software tools and on-line help may be downloaded.

Logic Tools

High speed DSP, analysis, customized triggering and other unique features may be added to the FMC modules by modifying the logic. The FrameWork Logic tools support RTL and MATLAB developments. The standard logic provides a hardware interface layer that allows designers to concentrate on the application-specific portions of the design. Designer can build upon the Innovative components for packet handling, hardware interfaces and system functions, the Xilinx IP core library, and third party IP. RTL source for the FrameWork Logic is provided for customization. Each design is provided as a Xilinx Vivado project, with a ModelSim testbench illustrating logic functionality.

The MATLAB Board Support Package (BSP) supports logic development using Simulink and Xilinx System Generator. These tools provide a graphical design environment that integrates the logic into MATLAB Simulink for complete hardware-in-the-loop testing and development. The MATLAB tools are an extremely powerful design methodology that can be used to generate, analyze and display the signals in the logic real-time in the system. Once the development is complete, the logic can be embedded in the FrameWork logic using the Xilinx Vivado tools.

The FrameWork Logic User sales brochure and User Guide more fully detail the development tools.

Applications Information

Maximum Data Rates

The maximum data rates supported by the module are limited by the host modules PCI-e speed and or memory bandwidth.

It is important to qualify systems for performance when high data rates are required.

Cables

The FMC-SDF module uses ribbon cable assemblies for the analog I/O. The mating cable should have a Samtec connector and high impedance characteristic for best signal quality.

FMC Breakout

An FMC Breakout Board with or without a cable is available to make the FMC-SDF IO signals available on an external PCBA. There are several versions available for multiple requirements.

80350-0-L0	FMC BREAKOUT NO SMA CONNECTORS
80350-1-L0	FMC BREAKOUT ALL SMA CONNECTORS WITH 3 FT EQCD RIBBON
	COAXIAL CABLE
80350-4-L0	FMC BREAKOUT NO SMA NO CABLE
80350-5-L0	FMC BREAKOUT ALL SMA NO CABLE

The Pin Mapping between the FMC-SDF IO connector and FMC Breakout is shown in the table below.

FMC-SDF J2	SIGNAL	FMC Breakout	SIGNAL	FMC-Breakout Jack
Pin 3	CH3_P	Pin 3	DIFF_A0_N	A0_N
Pin 5	CH3_N	Pin 5	DIFF_A1_P	A1_P
Pin 9	CH2_P	Pin 9	DIFF_A2_P	A2_P
Pin 11	CH2_N	Pin 11	DIFF_A2_N	A2_N
Pin 15	CH1_P	Pin 15	DIFF_A3_N	A3_N
Pin 17	CH1_N	Pin 17	DIFF_A4_P	A4_P
Pin 21	CH0_P	Pin 21	DIFF_A5_P	A5_P
Pin 23	CH0_N	Pin 23	DIFF_A5_N	A5_N
Pin 31	TACH_P	Pin 31	DIFF_A7_N	A7_N
Pin 33	TACH_N	Pin 33	DIFF_A8_P	A8_P
Pin 37	EXT_CLK_P	Pin 37	DIFF_A9_P	A9_P
Pin 39	EXT_CLK_N	Pin 39	DIFF_A9_N	A9_N
Pin 38	EXT_TRIG_IN_P	Pin 38	DIFF_B9_P	B9_P
Pin 40	EXT_TRIG_IN_N	Pin 40	DIFF_B9_N	B9_N
Pin 26	DAC0	Pin 26	DIFF_B6_P	B6_P
Pin 30	DAC1	Pin 30	DIFF_B7_P	B7_P

NOTE 1: All SMA cases are connected to a common ground on the FMC Breakout Board.

NOTE 2: Unused pins on FMC-SDF J2 are all connected to FMC-SDF ground (AGND), but unused pins on FMC Breakout SAMTEC connector are open.

NOTE 3: FMC Breakout Board SAMTEC connector pins 41, 42, 43, and 44 are connected to FMC Breakout ground (GND).

FMC Hosts

FMC modules can be used in standard desktop system or compact PCI/PXIe using a host card. The host cards are software transparent.

COPious-PXIe (80358) x8 PXIe FMC host with Zync Z7045 SoC	Cardsharp (80332) Combines Zync Z7045 SoC with FMC in compact stand alone design Conduction cooling	PEX6-COP (80284) x8 PCIe FMC host with Virtex-6 FPGA

Applications that need remote or portable IO can use either the eInstrument PC or eInstrument Node with FMC modules.

ePC-K7 (90502)	Mini-K7 (90600)
Windows/Linux embedded PC	Windows/Linux Embedded Single Board Computer
8x USB, GbE, cable PCIe, VGA	Extremely small form-factor
High speed x8 interconnect between modules	Single FMC IO Site and 1 GbE Link
GPS disciplined, programmable sample clocks and triggers to	8-14Vdc operation
FMCs	
1500 MB/s, 4 TB datalogger	
9-18V operation	

IMPORTANT NOTICES

Innovative Integration Incorporated reserves the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to Innovative Integration's terms and conditions of sale supplied at the time of order acknowledgment.

Innovative Integration warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with Innovative Integration's standard warranty. Testing and other quality control techniques are used to the extent Innovative Integration deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

Innovative Integration assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using Innovative Integration products. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

Innovative Integration does not warrant or represent that any license, either express or implied, is granted under any Innovative Integration patent right, copyright, mask work right, or other Innovative Integration intellectual property right relating to any combination, machine, or process in which Innovative Integration products or services are used. Information published by Innovative Integration regarding third-party products or services does not constitute a license from Innovative Integration to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from Innovative Integration under the patents or other intellectual property of Innovative Integration.

Reproduction of information in Innovative Integration data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice.

Innovative Integration is not responsible or liable for such altered documentation. Resale of Innovative Integration products or services with statements different from or beyond the parameters stated by Innovative Integration for that product or service voids all express and any implied warranties for the associated Innovative Integration product or service and is an unfair and deceptive business practice. Innovative Integration is not responsible or liable for any such statements.
